trilix

Business Intelligence Solutions

Every business, no matter its size or industry, is sitting on a wealth of hidden opportunities. Opportunities to drive revenue, increase efficiency, strengthen team performance, and reduce organizational spend, among other things.

At Trilix, we help companies like yours elevate data as a strategic partner to unlock these opportunities. Our team of analysts and strategists help you gain mastery of your data so you can feel confident and clear about how to move your business forward.

Data Strategy Development

At the core of every successful data ecosystem is a comprehensive strategy that lays out a roadmap for finding hidden opportunities in your data. After a deep-dive consultation, we'll build a strategy that identifies where you stand with data, where you want to be, and how you can bridge that gap.

Reports, Dashboards & Visualizations

Are you spending too much time, effort, and energy manually manipulating raw data and reports to make them paint a meaningful picture? We can ease this burden with proof-of-concept reporting and interactive dashboards, allowing you to spend more time on the work you're passionate about.

KPI Discovery

Are you tracking the right metrics? Not sure which measures correlate to success for your organization or your teams? We work with executives, as well as team leaders, to map out KPIs that work for you, based on your strategic goals and the behavioral processes that serve them.

Data Solutions & Support

Your data ecosystem is not a single piece of software, but rather a complex web of integrated technology. From the applications that generate your source data, to the tools that present insights, and everything in between, we consider your unique set of circumstances when connecting you with technology solutions.

Six Principles of Trilix Business Intelligence

Whether we are helping you create dashboards and visualizations, craft your data strategy roadmap, or any other data initiatives, we approach each engagement with the following principles in mind:

Data is a partnership, not a project

Business intelligence is for everyone

Start with strategy

Build momentum, but avoid inertia

Different solutions for different situations

Collaboration breeds success
